

# THE FULLER SCALE

The Fuller Scale is created by Public Invention to represent the amount of humanitarian impact an invention will have. The unit of humanitarian impact is named after R. Buckminster Fuller (1895-1983).

**One fuller** = the impact of all of the inventions made by Bucky in his lifetime.

## Physical Invention

## Social Invention

We empower Public Invention Teams that embrace the interdisciplinary talents that combine to shape the future: inventiveness, design, writing, art, photography, engineering, administration, fundraising, and other skills we cannot predict. All of our work is in service to humanitarian invention.

The Fuller Scale created by Robert L. Read and designed by Amy Cesal is licensed under a Creative Commons Attribution-ShareAlike 4.0 International License. Created for Public Invention: [www.pubinv.org](http://www.pubinv.org).
